

Sai Kiran Reddy Kondreddygari | Data Engineer

Saint Louis, MO | +1 (917) 704-9894 | kondreddygariisaikiranreddy18@gmail.com | [LinkedIn](#)

SUMMARY

Data Engineer with 4+ years of experience building scalable data pipelines, optimizing data infrastructure, and enabling real-time analytics across cloud and on-prem environments. Skilled in Python, SQL, Spark, and AWS, with a strong focus on data quality, performance, and cross-functional collaboration. Proven ability to deliver reliable, efficient data solutions that support strategic decision-making and enterprise growth.

SKILLS

Programming & Scripting Languages: Python, SQL, Bash, Scala, JavaScript, TypeScript
Data Engineering & Pipeline Development: ETL/ELT Pipelines, Data Modeling, Data Warehousing, Apache Airflow, dbt, Apache Spark, Apache Beam, Alteryx, Talend, Informatica
Databases & Storage: PostgreSQL, MySQL, Snowflake, Amazon Redshift, MongoDB, Delta Lake, Parquet
Cloud & Distributed Systems: AWS (S3, Lambda, Glue, EMR, Redshift, Athena), GCP (BigQuery, Dataflow), Azure Data Factory
Streaming & Real-Time Processing: Apache Kafka, AWS Kinesis, Spark Streaming, Flink, Apache NiFi, Hive
AI & ML Tooling: MLflow, TensorFlow, Feature Stores, Jupyter, Hugging Face Transformers (for NLP), OpenAI APIs, LLMs, Supervised & Unsupervised Learning, Hadoop,
Data Science Collaboration: Model Deployment Support, Feature Engineering, Data Preprocessing, Experiment Tracking, A/B Testing Pipelines
Infrastructure & DevOps: Docker, Kubernetes, Terraform, Git, Jenkins, CI/CD pipelines, Monitoring (Prometheus, Grafana, ELK Stack)
Version Control & Collaboration: GitHub, GitLab, Confluence, Jira
Soft Skills: Agile Development, Stakeholder Communication, Technical Documentation, Best Practices, Problem Solving, Attention to Detail

EXPERIENCE

Data Engineer, UnitedHealth Group MO	Jul 2024 – Present
- Built 12 ETL pipelines in AWS Glue and EMR processing over 5TB of claims data daily, enabling analytics for finance, clinical, and actuarial reporting teams. - Integrated real-time vitals data from 7 IoT sources using Kafka and Spark Streaming, reducing response latency in critical patient alerts. - Developed a Delta Lake-based architecture on S3, improving query performance by 42% and cutting storage costs by 18% through format and partitioning optimization. - Created dbt models and Great Expectations checks for 30 datasets, reducing downstream data failures and invalid joins by 28% within two quarters. - Automated monthly HIPAA compliance reports with Python scripts and SQL procedures, eliminating 20+ hours of manual work per cycle across regulatory teams. - Collaborated on 3 predictive risk scoring models deployed via AWS Lambda and Feature Store, supporting near real-time scoring of 2M+ patient records weekly. - Tuned Spark job configurations and S3 partitioning strategy to reduce pipeline runtime by 35%, improving pipeline SLAs across business-critical reporting jobs.	
Data Engineer, Mphasis India	Jan 2021 – Dec 2022
- Migrated 17 batch pipelines to Apache Airflow and Spark on GCP, improving pipeline reliability by 73% and reducing job runtime. - Built enterprise data warehouse on BigQuery for banking client, supporting 100+ dashboards and handling 4TB of structured financial transaction data. - Deployed streaming fraud detection pipeline using Kafka and Flink, achieving <30-second latency and flagging ~1,200 suspicious transactions daily. - Reduced data storage costs by 32% through partition pruning and format optimization for Parquet files across multiple GCS data zones. - Created Jenkins-based CI/CD pipeline and deployed infrastructure with Terraform, cutting provisioning time from 2 days to under 4 hours. - Designed over 25 reusable dbt models for business logic transformation and lineage tracking, improving developer onboarding and cross-team collaboration. - Documented 30+ datasets and created interactive lineage maps in Confluence, improving query troubleshooting time by 40% for analysts and engineers.	
Data Analyst, Cybage Software India	Jan 2020 – Dec 2020
- Automated 30+ Tableau dashboards for supply chain metrics, reducing manual Excel reporting efforts by 12 hours weekly for client logistics teams. - Cleaned and processed 10M+ rows of transactional data monthly, enabling analysis of delivery success rates, delays, and customer return trends. - Conducted A/B test analysis for two checkout feature changes, contributing to a 7.5% increase in conversion rates over three months. - Developed Python-based loaders and schedulers for ingestion workflows, decreasing daily load failures by 80% within the first quarter of deployment. - Built SQL scripts to calculate delivery SLA breaches, helping business operations renegotiate terms with four low-performing vendors. - Supported marketing attribution analysis using UTM tracking and session data, identifying top three performing campaigns by ROI over six months. - Delivered weekly ad-hoc insights for product and operations teams, facilitating decisions around inventory stocking and shipping prioritization during peak events.	

EDUCATION

Masters in Data Analytics Webster University, St Louis, MO	Jan 2023 – Dec 2024
Bachelors in Electrical and Electronics Engineering Bharti Institute of Engineering and Technology	Jul 2018 – May 2022

CERTIFICATION

Generative AI Fundamentals – Databrick
